Does anyone know what causes it? The reason I ask is there was an article which mentioned it in one of our National dailies here in Canada today. Has there ever been any revelation come through our circles or charismatic circles about it?

From the article

And imagine how the latest news "that previous abortions can raise the risk of autism by 26% in later children carried to full term" will be received. Most reports on the October 2011 Harvard University study didn't even mention the abortion-autism link, just the gestational diabetes-autism connection.
