Yesterday I heard that ABC Nightline did a show on speaking in tongues. They did a brain scan while a person was praying. The results are fascinating!

Here is the address to the article: (March 20, 2007)

http://abcnews.go.com/Nightline/story?id=2935819&page=1

The video address is:

Nightline Online: Science in Faith

Interesting article William.

I like the idea that the mind shuts itself off when we pray in tongues (my interpretation.) Hey...whenever we are troubled over something...you know...when something is on our minds bothering us, we can pray in tongues and we can shut those other thoughts out.

God knew what He was doing when He poured out that wonderful gift on the day of Pentecost.

Mark

The actually showed some of the scan in the video... it was interesting. Especially given the fact that it was an ABC news report!

Blessings,
William
