Has anyone else been reading about this company? They are deeply involved in US Federal affairs. And they love to do chip implants. I have no doubt whatsoever that the Mark of the Beast could happen very soon.

Yes weâ€™ve been keeping up with it for quite some time. Verichip is based in Delray Beach Florida. The first humans to receive the microchip were a husband, wife and their 14 year old son. The son died 4 years later. Since then Verichip has been pushing their product under the guise of helping others. In particular they are targeting newborns, (the babies canâ€™t get switched or could be located more easily if they were snatched) people with chronic medical problems, (all of their medical information would be right there when they need it) and Alzheimerâ€™s patients (if they wander off it will be easy to identify them). There is actually a bar in Barcelona Spain, the Baja Beach Club, that chips their elite club customers to make it easier to order drinks.

It is becoming more and more popular to â€œget chippedâ€•. Walmart is on the leading edge of this technology with plans to use RFID (radio frequency identification) tags on products sold in Walmart and Sams stores. Although aggressive effort to implement this early on failed, they are still moving forward.
